(54) WASTE WATER TREATMENT METHOD AND APPARATUS

(57)Abstract:

PROBLEM TO BE SOLVED: To easily wash a membrane unit and to continue the treatment of raw water at the time of the washing of the membrane unit.

SOLUTION: An activated sludge tank in which a membrane unit 1 is arranged in an immersed state is divided into a plurality of independent unit tanks 4a, 4b, 4c constituted so as to be operated and stopped individually. The operation only of the unit tank of which the membrane unit 1 must be washed is stopped and activated sludge in the unit tank is transferred to empty the tank and the membrane unit 1 is washed in the empty unit tank. The treatment of raw water is continued in the remaining unit tanks without stopping operation.
